EXECUTIVE SUMMARY

ABOUT TRUALT BIOENERGY LIMITED

We are one of India's largest biofuels producers, strategically positioned as a diversified and forward-looking player in the country's rapidly evolving biofuels industry with a strong leadership presence in the ethanol segment.

As of March 31, 2025, we hold the distinction of being India's largest ethanol producer based on installed capacity, with a total capacity of 2,000 kilo litres per day (KLPD) and an operational capacity of 1,800 KLPD, representing approximately 3.6% of the country's total ethanol production capacity (Source: CRISIL Report).

As of March 31, 2025, we have established Unit 5 with an installed capacity of 200 KLPD. This unit is not currently included in our operational capacity as the environmental clearance (EC) is awaited.

During Q1 FY26, the Company has been in a phase of transition. Out of the total 2,000 KLPD installed capacity, 1,300 KLPD of our mono-feed (sugarcane juice/sugar syrup/molasses) capacity is being converted to dual-feed, enabling ethanol production from both sugar-based and grain-based feedstocks, including damaged grains unfit for human consumption.

Progressively, we intend to ramp up our operational capacity from 1,800 KLPD as of March 31, 2025, to the full installed capacity of 2,000 KLPD. In addition to ethanol, we also produce extra neutral alcohol ("ENA"), which serves as the primary raw material for the manufacture of alcoholic beverages. Our product portfolio further

includes dry ice and liquid carbon dioxide (" CO_2 "), which are by-products of the ethanol production process.

Through our subsidiary Leafiniti Bioenergy, we are among the first producers of Compressed Biogas (CBG) under the Government's SATAT initiative and are developing multiple CBG plants through various strategic partnerships including a share subscription cum shareholders' agreement with Gas Authority of India Limited (GAIL), a Memorandum of Understanding (MOU) with Sumitomo Corporation Asia & Oceania Pte. Ltd. and a MOU with a globally recognized Japanese trading and investment company and a Japanese gas company.

We are also expanding into Second-Generation (2G) Ethanol and Sustainable Aviation Fuel (SAF). Our planned SAF facility will produce up to 10 crore litres of SAF annually, which is intended to place us as one of the world's largest producers of SAF from Ethanol.

TruAlt has also received approval from the Ministry of Petroleum & Natural Gas (MoPNG) to market motor spirit and diesel, with five operational biofuel retail stations and plans for 100 outlets across India.

CORPORATE PORTRAIT

We are one of India's **leading biofuel producers** and India's **largest ethanol manufacturer**.

As a young company, since commencing operations in 2023, we have steadfastly pursued our objectives of nurturing a circular economy, supporting sustainable agriculture, empowering local communities and realising India's green mobility and clean energy targets. Our strategic positioning and diversified portfolio are closely aligned with the government's sustainable growth policies—paving the way for a greener India.

Purpose

TruAlt Bioenergy (formerly known as TruAlt Energy Limited) is one of India's Largest Biofuels Company, dedicated to crafting sustainable energy solutions. Our primary focus lies in producing biofuels such as 1G ethanol, Compressed Biogas (CBG), Fermented Organic Manure (FOM). In the near future we intend to venture into the production of Second Generation (2G) ethanol, Sustainable Aviation Fuel (SAF), Biofuels Dispensing Stations and Green Hydrogen.

We aim to foster a circular economy, empower agriculture, strengthen local communities, address environmental issues and make sustainability and green mobility a tangible reality.

Vision

We aspire to lead the Global Energy Transformation Story through innovation, cutting-edge technological progress, and creating wealth from waste.

Mission

We are on a mission to spearhead the global transition to a sustainable, cyclical, and self-reliant economy, significantly contributing to achieving net-zero emissions. We aim to drive the adoption of cleaner energy sources, enhance energy security, and create an era where sustainability biofuel is the norm.

Proposed Product Portfolio

- 2G Ethanol
- Sustainable Aviation Fuel
- Mevalonolactone/Mevalonic Acid
- Future Fuels & High Value By-products

MANAGING DIRECTOR'S MESSAGE

Commenting on the performance for Q1FY26, Mr. Vijay Nirani Managing Director of TruAlt Bioenergy Limited, said:

“

I am pleased to share the first quarter results as a public company. Q1 has been a period of strategic and forward investment for TruAlt Bioenergy.

While capacity utilisation may appear modest this quarter, our focus remained firmly on advancing the capital expenditure programme, particularly the integration of grain-based dual-feed capabilities at Units I, II and IV at Mudhol, Hippargi-Maigur, Taluk Jamkhandi, and Jalageri, Taluk Badami, Bagalkot District, Karnataka.

This infusion represents a significant milestone in achieving dual feed / fully flexible feedstock operations across all quarters, enabling seamless processing of both sugarcane-based and grain feedstocks unfit for human consumption throughout the year. As these units are commissioned, operational days are expected to increase from around 140 to nearly 330 annually, ensuring near-continuous operations and improved efficiency.

Given the flammable nature of ethanol, the two plants underwent temporary shutdowns during the quarter to facilitate the installation and commissioning of the dual-feed integration machinery, a conscious choice prioritising long-term efficiency over short-term output. These were planned, safety-led pauses, aligned with our commissioning schedule and part of our roadmap to achieving rated capacity over over all the 4 quarters and build optimal capacity utilisation once the dual-feed units become fully operational.

Despite having supply allocations from Oil Marketing Companies (OMCs) in hand and access to adequate raw material supplies at stable procurement levels, the quarter reflected the natural transition of an expansion phase. The temporary moderation in production, therefore, represents a strategic pause and investment in transformation that will soon de-risk single-feedstock dependency, deliver greater operational resilience, enhanced productivity and improved margins.

Q1 has begun to reflect an encouraging upward momentum, with revenue growing by 54% and profit after tax (PAT) by 122%. The transition from mono-feed to dual-feed operations represents a key milestone, enhancing our feedstock flexibility and operational efficiency and positioning us for sustained, scalable growth in the coming quarters. In essence, Q1 was an investment-heavy, transformation-driven quarter laying a strong foundation for operational resilience, feedstock flexibility and future-ready growth. As these new capacities come through, TruAlt Bioenergy is well-positioned to deliver stronger volumes, better margins and greater stakeholder value in the coming quarters.

Favourable and well-distributed monsoon rains across Maharashtra and Karnataka have fostered

excellent sugarcane growth and strong field conditions. Higher reservoir levels and continued rainfall projections signal a promising season ahead, while Uttar Pradesh and Tamil Nadu are also reporting improved yields and recovery rates. The anticipated La Niña phase later in 2025 is expected to further enhance rainfall, strengthening prospects for a larger and more resilient sugarcane crop across India. The grain scenario too remains stable, supported by healthy kharif sowing and improved crop prospects following widespread monsoon rains, supporting continuity in dual-feed ethanol operations through the year.

With these investments, TruAlt Bioenergy continues to reinforce its role as a national contributor to India's clean energy transition, building the capacity and systems to drive energy security, rural empowerment, and carbon reduction at scale.

As we begin this new chapter as a listed entity, we remain guided by our founding ethos from rural roots to greener routes and steadfast in our commitment to creating enduring value for our shareholders, partners and the communities we serve.

”

Strategic Use of Proceeds

- **Multi-feedstock Expansion at TBL Unit 4:** A key portion of the proceeds will fund the establishment of multi-feedstock operations, enabling grain-based inputs and enhancing production flexibility and resilience.
- **Working Capital Augmentation:** Part of the proceeds will be utilised to strengthen working capital, supporting higher capacity utilisation and consistent operational cycles across distillery units.
- **Operational Readiness Enhancement:** Proceeds will be strategically deployed towards installation of new equipment and supporting infrastructure to operationalise the multi-feed unit and improve efficiency at the production level.

COMMITTED TO INDIA'S ENERGY FUTURE

Increase Non-fossil energy capacity to

500GW by 2030

Reduce total projected carbon emissions by one billion tonnes from 2021 levels till

2030

Reduce carbon emissions intensity (emissions per unit of GDP) of the economy by at least

45 % by 2030,
from 2005 levels.

Achieve

Net Zero by 2070

ETHANOL BLENDING PROGRAMME

The Government of India has advanced the target of 20% ethanol blending in petrol from earlier 2030 to ESY 2025-26.

Approval by Government for allocation of **52 Lakh Metric Tonne (LMT)** of surplus **Food Corporation of India (FCI)** rice for ethanol production, each for the ESY 2024-25 (from 1st November 2024 to 31st October 2025) and ESY 2025-26 up to 30.06.2026.

"We are contributing to India's energy security and climate goals by delivering innovative, homegrown biofuel solutions. Our strategic positioning and diversified portfolio are closely aligned with the government's sustainable growth vision paving the way for a greener India while transforming farmers into key partners in the nation's energy value chain, turning agricultural potential into enduring national strength."
